

Citizen`s Island and Corona March 17<sup>th</sup> 2020

Citizen`s Island is a [Thinsia](#) project to give every Citizen a personal, super secure, place for personal data.

We are building a website [here](#), part of the team is [here](#) and planned services are [here](#).

Citizens can store their medical record on their Island and give restricted access to their data to research institutes. The access can but does not have to be anonymized and restricted to other kinds of information (location, gender, age etc). Citizens can also give access to their live information; several medical sensors are built in their mobile phone. But also, social behaviour can be captured and provided to research institutes. Think of the Chinese [Corona surveillance](#) but then voluntary! In the Citizen`s Island case the access to Citizen`s data is much more accurate and easier to obtain. No drones needed! Governments can choose to award those Citizens for their data, for example with money. The amount of quality data will enlarge the knowledge of the virus and makes it possible to rescue lives.

The Corona virus is just one example; your Citizen`s Island medical information will revolutionize healthcare with massive quality data, voluntarily provided by Citizens.

You can support our Citizen`s Island project by donating to

Bank	ING Netherlands
